

Dr. Von Sigler received a B.S. in Agronomy from Purdue University and a Ph.D. in Agronomy and Environmental Sciences also from Purdue University in 1999. He is currently an Assistant Professor of Environmental Microbiology at the University of Toledo, OH. His Microbial Ecology laboratory is dedicated to basic and applied environmental microbiology research with an emphasis on the environmental transmission of pathogens. Recent projects in his lab involve: Tracking *E. coli* as an indicator of fecal pollution in Maumee Bay and associated creeks, ditches and rivers. Establishing the routes of transmission of *Staphylococcus aureus* between environmental reservoirs and humans and Determine the fate, impact and transport of potentially pathogenic bacteria applied to agricultural lands in association with biosolids recycling.
